JUDGE SMITH TO DECIDE NOTED MINE CASE

(From Thursday's Daily.)

Judge F. O. Smith has returned from Cochise county, where he presided in the superior court in the famous \$500,000 trial of the heirs of the late Patrick Cunningham, vs. the heirs of the late Martin Costello, the closing argument being heard, and the case taken under advisement.

During the trial of the case a motion was made to re-open the litigation on behalf of the defendant, on the ground that newly discovered evidence was available, but this motion went over for future decision.

This legal controversy has attracted more general interest than any litigation that has ever occurred in mining annals of the southern part of the state, the principals in life being associated in mining, and the specific issue being the amount received for the sale of ground which is now the Calumet and Arizona Copper Company holdings, for which over half a million dollars was paid Martin Costello.

While returning from the south Judge Smith again was called to the bench in Maricopa county to hear arguments in the notorious case of Moore vs. Moore, to modify the decree giving the custody of the minor daughter to the grandmother. Eight attorneys are fighting inch by inch this family controversy, which is attended behind closed doors in the legal hearings being held.

The sinking of a new double compartment shaft on virgin ground acquired recently, is to begin immediately, while exploration will be carried ahead from the Little Daisy location until the entire system is thoroughly explored. A very large plan of work is being mapped out, and it is freely predicted that within the next few months some very important determinations will be forthcoming.

SMALLEST CORNER LOT IN THE WORLD

NEW YORK, Jan. 15.—As a result of the tabulation of the city's most unusual pieces of property, what is probably the most freakish bit of real estate in the world has just been discovered here in the shape of a corner plot in the lower part of the city where corners are usually sold at hundreds of thousands, if not millions of dollars.

The corner in question, however, is valued at only fifty dollars. The low valuation is partly explained by its size, or rather lack of size, since it is believed to be the smallest corner lot in the world, and on this to a great extent depends its claim of freakishness. A derby hat would almost cover the propeerty in question which is so small that a baby could not stand on it without encroaching on city property. It would be impossible to erect any sort of a structure upon it, and yet it is a corner and is taxed by the city as such.

According to the records of the Tax Department this tiny property has a frontage on one street of one foot and four inches; on the other of one foot and two inches and a rear line of just one foot. The mite of land which is within half a mile of the center of the world's greatest financial district, is what was left as the result of street extensions put through by the city.

A search of the records of the Tax Department has revealed the fact that not far from this corner is another which is probably the second smallest and cheapest in the city. This chip of land, which is about twice the size of the title holder, is hardly noticeable to the passerby, but it is valued for tax purposes at \$100 and has the distinction of being the only corner at that price in the city. Directly across from this corner is another on which is located what is probably the smallest building in the city, built on a lot eleven by fourteen feet, and capable of holding only two persons. The smallest house in the city, as revealed by recent research, is three feet six inches wide, twenty-two feet long and
